smpl.

Music **Player**

(EN) Convert Files to .mp3

The **smpl** Music Player will play files in .mp3 format. If your files are in another format - such as .m4a - you must convert them to .mp3 or they will not play in the smpl Music Player. This is most easily done using the iTunes program.

1. Open iTunes.
2. Mac: From the menu bar at the top of your computer screen, choose **iTunes > Preferences**.
   Windows: From the menu bar at the top of the iTunes window, choose **Edit > Preferences**.
3. Click the General tab, then click **Import Settings** in the lower section of the Window.
4. Click the menu next to **Import Using**, then choose the encoding format that you want to convert the song to.
5. Click **OK** to save the settings.
6. From your library, select one or more songs that you want to convert.
7. **Choose File > Convert, then Create [format] Version**. The format shown is the one that you chose in step 4. For example, if you chose mp3 Encoder, select **Create mp3 Version**.

New song files appear in your library next to the original files.
